SUMMARY

specializing in secure, scalable architecture and clean code for high-growth products. With 6+ years of experience, I've built apps across fintech (payment gateways, financial dashboards), e-commerce, logistics, and social impact working both as a freelancer and within international teams. My focus is on crafting maintainable systems that scale, implementing robust security practices, and optimizing performance. From refactoring legacy code to launching new products, I bridge technical excellence with real world impact. I'm now seeking to bring this expertise to an innovative company where architecture, security, and scalability are priorities to build products that scale globally while empowering both users and development teams.

PROFESSIONAL EXPERIENCE

2024/12 – present

Gabes, Tunisia

Barsha Technology, Lead Mobile Developer 📁

Contributed to development 40% and fully **led the publishing process 100%** of multiple apps, including **Barsha-Food, Epark, Events, Kharaj, and Maghasel**, ensuring successful releases across platforms while collaborating in a Scrum environment using Jira to manage tasks and sprints.

- **Barsha-Food::** Developed a full-featured restaurant discovery app using Kotlin and Android Jetpack components with MVVM architecture. Key implementations included Google Maps API integration for location-based listings, a 360° restaurant viewer, QR/barcode scanning for menu access, and multiple payment gateway integrations (Google Pay, Apple Pay), all connected via RESTful APIs.
- **Epark:** fixed critical bugs, integrated payment gateways (Apple Pay, card payments, and loyalty points), and launched the app on the **Play Store** and **Apple App Store**.
- **Events:** Refactored the complete purchase flow from cart through payment confirmation, Implemented Moyasar and Google Pay payment gateways, and successfully published the app to the Play Store.
- **Kharaj:** Upgraded Gradle and Kotlin versions, migrated from synthetic views to view binding, added 65% unit test coverage, refactored the add product flow, improved the login transaction between different user types, created transportation features, and resolved stability issues.
- **Maghasel:** Upgraded project dependencies, fixed legacy bugs, and successfully published to the Play Store.
- Supervised and **mentored 2 interns** in developing a food chain ordering app, guiding them through designing a clean Flutter application using **clean architecture** and **state management**, with a backend hosted on **Firebase**. Oversaw architecture decisions, feature development, and ensuring high-quality, well-tested code.
- Reduced technical debt by 30% through legacy code optimization and modernization across projects.

2023/10 – 2024/10

Tunis, Tunisia

Allcarta, Lead Mobile Developer 📁

- Developed **Allcarta** and **Allcarta Pro** entirely from scratch, including architecture design and reusable component development.
- Delivered ~80% of the total codebase personally and published both apps to iOS and Android stores.
- Led a small team, mentoring developers on best practices and maintaining high code quality.

- Enhanced app performance and UI/UX, achieving a 95% user satisfaction rate.
- Streamlined project workflows with Asana, reducing turnaround times by 30%.

2019/07 – Ongoing
Tunis, Tunisia

Freelance, Mobile Developer

- Developed Kotlin/Flutter apps for clients and startups (fintech, e-commerce)
- Contributed to cross-functional projects (UI, API integration, testing)

PROJECTS

2025/01 – 2025/03

Nomadia – Baby Gear Rental App

- Developed a peer-to-peer rental platform for mothers to borrow/lend baby items (strollers, cribs, etc.)
- Integrated secure payments and in-app messaging
- Designed UI/UX for maximum conversions with easy item discovery

2024/06 – 2024/10

Jeeby – Delivery Application [↗](#)

- Developed end-to-end using Flutter.
- Features: Multi-country delivery points, real-time messaging, online payments, and robust API integration. Showcased expertise in scalable architecture and seamless user experience.

2023 – 2023

Staffy - Workforce Management App [↗](#)

- Built with Flutter, Firebase, and Google Maps API.
- Features: Real-time chat, task management, multilingual support (English, Arabic, French).
- Improved user retention by 15% through streamlined UI/UX.

2022

Airbnb-like website hosted on servers [↗](#)

- Full-stack development using HTML, CSS, Flask, and MongoDB.
- Built a custom RESTful API and managed infrastructure with Docker and NGINX.

SKILLS

Mobile

- **Frameworks & Languages:** Flutter (Dart), Kotlin, (Java), Android Jetpack
- **Payment Integrations:** Google Pay, Apple Pay, Moyasar, Stripe, PayPal
- **Architecture & State Management:** Clean Architecture, GetX, Stacked, Bloc, Provider
- **Local Storage & Persistence:** Hive, SQLite
- **Testing:** Unit, Widget, Integration Testing

DevOps & Workflow

- Git, GitHub, Bitbucket
- CI/CD: Fastlane, GitHub Actions
- Agile / Scrum (Jira, Asana)
- UI Collaboration: Figma

API, Web & Backend (Familiar)

- RESTful API Design, Firebase
- Frontend: React
- Backend: Node.js, Flask
- Deployment: Docker, NGINX
- Databases: SQL, NoSQL

Education

Lac 1, Tunisia

Holberton School Tunisia, Full Stack Software Developer [↗](#)

LANGUAGES

- English (Fluent)
- Arabic (Native)
- French (Conversational)
